

Euro Pallet

800 x 1200 x 144

The Euro pallet (800 x 1200 x 144 mm) has been the basis of the open exchange pool since 1961. With over 1 billion in circulation, it is the world's most widely used load carrier in industry, trade and logistics. Independent quality assurance and licensed manufacturers and repairers ensure trouble-free use, even in automated processes. The global exchange system conserves resources and reduces CO₂ emissions.

Independent quality control

Accredited inspection organisations check compliance with the prescribed quality standards in accordance with UIC standard 435-2 (production) and UIC standard 435-4 (repair). The inspections are unannounced and documented.

Phytosanitary treatment

Compliance with the ISPM 15 standard is essential for the international movement of goods. Euro pallets are produced strictly in accordance with the IPPC specifications, although recognition varies from country to country. The plant protection authorities will provide further information.

Repair

Defective Euro pallets are repaired in EUR-certified facilities in an environmentally friendly manner. Each repaired pallet receives a repair identification nail with the company's logo and licence number.
